

WEB DESIGN STRATEGY DOCUMENT : LUKE'S PORTFOLIO WEBSITE

The website's goal

The primary goal of my Portfolio Website is to serve as a professional digital portfolio that showcases my skills, creativity, and completed projects as a junior/upcoming software developer. The website is designed to highlight my technical proficiency, visual design sense, and passion for innovation and development.

Key objectives include :

- To showcase my work in software development, web design, and multimedia design.
- For attracting potential employers and clients by demonstrating capability through projects.
- Building a personal brand identity that showcase professionalism, confidence, and creativity.
- Encouraging engagement and communication through accessible contact options and social links to make it easier for employers to contact me.

My website aims to make a strong first impression while remaining easy to navigate across different device, reflecting technical and design competence and usability.

Target Audience :

The website is primarily aimed at:

1. **Potential Employers** – Recruiters or managers looking for a junior developer with technical and creative potential. They value clarity, skill demonstration, and a clean, professional layout.
2. **Clients or Collaborators** – Individuals or startups interested in working with a developer who can design and build practical, user-centered digital solutions.
3. **Peers and Professionals** – For fellow developers and designers seeking to network or share knowledge.

Design Persona :

The design persona of my portfolio website is modern, vibrant, sleek and tech-inspired, reflecting my identity as an aspiring software developer. My site uses navy-blue and white as background colors with red the main color and also serves as accent colors, symbolizing determination and high energy, while white typography ensures readability and contrast. The tone is professional but approachable, designed to communicate reliability and enthusiasm for technology. Visual elements such as rounded profile images, smooth hover effects, and a responsive layout reinforce a sense of precision and attention to detail. The design conveys both creativity and discipline, which align with the mindset of a capable developer.

Content Hierarchy

My content on the website follows a logical flow to support usability and visual storytelling:

1. **Header / Navigation Bar** – Fixed at the top for instant access to main sections: The inclusion of a **CSS-based hamburger menu** ensures seamless navigation on mobile devices.
2. **Home Section** – Provides a short self-introduction and a strong visual focus with a professional image and call-to-action buttons (“Hire Me” and “Contact Me”).
3. **Skills Section** – Organized into categories (Development, Multimedia, Software) for quick scanning and easy comprehension to display my main skills.
4. **Portfolio Section** – Displays projects I have completed in a structured table format with visuals and descriptions, prioritizing proof of the projects.
5. **About Section** – Adds personal background, values, and academic information, and what are my goals for the future as an IT professional.
6. **Contact Section** – Provides a straightforward form and multiple social links to ensure easy communication.
7. **Footer** – Concludes the site with navigation links, copyright notice, and social media icons, reinforcing professional branding.

This hierarchy was chosen to **lead the user from introduction to action**, ensuring visitors can quickly understand who I am, what I do, and how to connect with me.
